Connect and Amplify Guest Experiences.

SAU DIGITAL

HOSPITALITY DAS / MOBILE SERVICE COVERAGE

Tech-savvy hotel guests are unforgiving – with customer satisfaction plummeting – if quality mobile phone coverage isn't on offer. Research shows hotels that utilise mobile apps and functionality – and offer quality mobile coverage – have higher guest satisfaction and create memorable guest experiences.

But there's challenges: a mobile signal is impacted by quantity of users; interference from competing high-rise structures nearby; and inclement weather. So, how can hotels optimise mobile experiences, while also counteract intrusions? Fortunately, there's a proven, affordable and effective answer: Enter mcSquared™ by EzeStream Digital.

Industry Leading   **Scalable Solutions**   **Improved Access**   **Best Guest Experience**
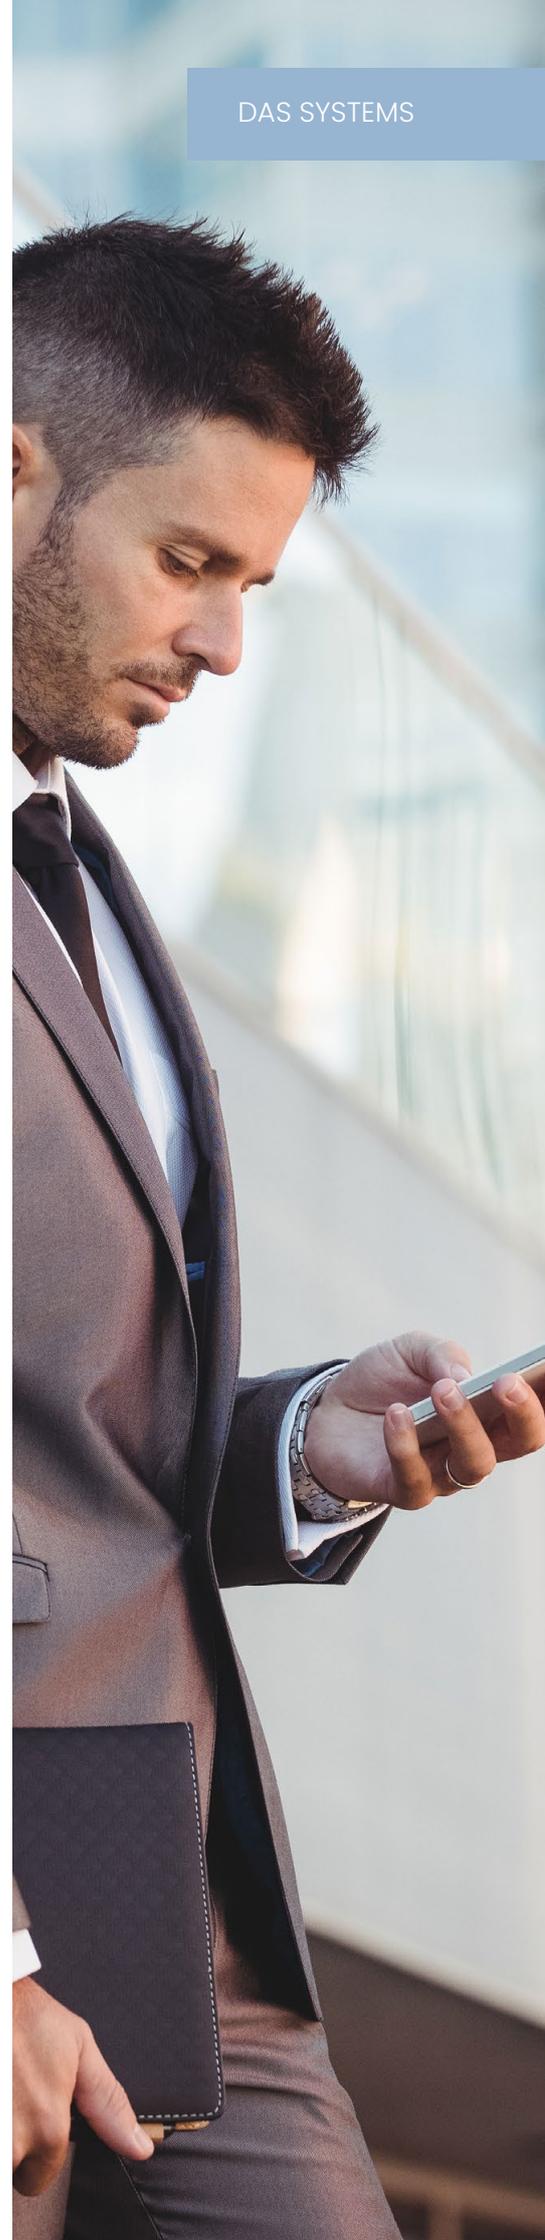

DAS SYSTEMS

FEATURE SUMMARY

Partnering with EzeStream Digital, SAU Digital Australia delivers a high-grade solution that addresses – and solves – all mobile phone reception issues for hotel guests. Working in collaboration with the hospitality industry, SAU Digital is working to ensure guests stay 'happy and connected,' while receiving unparalleled and uninterrupted mobile service coverage.

Industry Leading

Based on technology already proven to work successfully and reliably in Asia, Europe and North America, the mcSquared™ has industry leading coverage (up to 100dB max Gain).

Scalable Solutions

Built for commercial-grade use and scalability, the technology grows with your business requirements and future development plans.

Improved Access

The technology improves both voice and data speeds on a range of 3G and LTE spectrums, and a host of antenna types to suit: guest rooms; hallways; lobbies and other public spaces; recreational areas; and car parks.

Guest Experience

Meets all Australian regulatory requirements and improves signal on any standard 3G/4G/LTE (and soon 5G) mobile device, so your guests will stay happily connected.
